

palisades pack™ key features

THE LEADER OF THE PACKS SHOWS OFF ITS USEFUL FEATURES.

removable saddlebag system

Four side-release buckles make it easy to attach and detach the pack's saddlebags. The pack's four-point X-mount connection stretches the pack over the harness.

1. Unclip two front and two back buckles.

2. Detach and lift saddlebags.

Result: separate saddlebags and harness

Remove the saddlebags for easy harness fitting, at rest stops, and for water crossings.

hydration system

The Palisades Pack is equipped with two water bladders, one carried on each side of the pack. The bladders dispense water to keep your dog well hydrated on the trail. In addition to carrying water, the bladders cushion the load, aid in cooling the dog, and can be used to trim and balance the load from side to side.

1. Fill both bladders.

2. Insert into left and right saddlebags.

Result: dispense water on the trail

load compression system

Side pockets hide and protect the pack's load compression system.

Open the pocket to access the compression straps.

Once the pack is loaded and ready to go, grasp the strap tabs and pull. The straps will secure the load, allowing for a more comfortable, compact carry.

To release the compression, pull the colored lanyard to loosen the straps.
